Peer benchmark: $ per IT MW-yr, contracted vs energized MW, power and permits (CoreWeave, IREN, Oracle, Nscale, Lambda, Crusoe, Bitdeer vs Nebius)

Nebius Peer KPIs | as of Fri Oct 9, 2026 (ET) | public sources only | Nebius on model v0.9e locks | $ per MW-yr = TCV / term / MW for each named contract ($M) | comp band $9.7-16.7M unchanged | R reported/primary, D derived from R, P press (footnoted), E estimate, n/d not disclosed | **red bold** = print >= $20M/MW

Only one contract with disclosed MW reaches $20M/MW: Bitdeer, ~15 MW, a <= $22.4M ceiling, basis from secondary sources.

Company	Disclosed $M per IT MW-yr (named contracts) + company KPI prints	MW basis of the $ figures	Contracted vs energized (active) MW	Power (utility / ISO, interconnection, on-site gen)	Permit status	Sources (full list: xlsx Sources tab)
CoreWeave key site: Denton TX (Core Scientific)	n/d for every named deal: Meta $14.2B/6.2y and $21.0B/6.7y, OpenAI $22.4B (3 orders), Jane Street $6B, Anthropic (no value) - no MW disclosed [R]. KPI: **~$40M/MW-yr** on 3-6-month deals[1] [R]. Context: Denton colocation ~$1.4M/MW-yr (shell+power, not compute) [D].	Contracts: n/a (no MW). $40M KPI: 'MW' unstated; CRWV active power reads IT [E].	Contracted 3,700 (Jun-30) → ~4,200 (Aug-11) [R]; active 1,500 [R] = 2.5x [D]. Denton ~260 IT active/billed [D on R].	Denton Municipal Electric PPA (~394 MW); ERCOT: 297 MW energized + 74 MW validated, both outside Batch Zero [R]. Standby gensets only [R].	TCEQ PBR 179143 standby engines [R]; no Title V/NSR [R, absence]. City moratorium: 2nd hearing Oct 27, vote >= Dec 1; city attorney: need not stop existing projects [P].	$: 8-Ks 9/30/25, 4/9/26; PR 4/15/26; convert deck 8-K 9/17/26 sl.7. MW: Q2'26 PR 8/11/26. Pwr/permit: CORZ 8-K 9/10/26; TCEQ PBR 179143, Title V/NSR lists 10/8; Community Impact 9/24.
IREN key site: Childress TX (Microsoft Horizons)	Microsoft $9.7B/5y/200 IT MW = 9.7 [D]; NVIDIA $3.4B/5y/~60 MW = 11.3 [D] → named range 9.7-11.3. KPI: recent 3-yr deals **>$20M** and discussions **~$25M** (unsigned)[2] [R].	Microsoft: IT (company). NVIDIA: 60 MW unlabeled. KPIs: 'per MW (IT)'.	Contracted AI ~260 IT (200 + ~60) [D]; operating AI ~40 MW at Jun-30 [R]. Childress now ~75 active (50-100) / 50 billed IT (H1 accepted 8/13) [D on R].	AEP Texas / ERCOT; 750 MW grid, existing energized load incl. legacy mining; IREN-owned substations [R]. No on-site generation found.	TCEQ Title V #4951 'Administratively Complete', not issued; inside the Sep 21 Texas data-center permit pause [R/P]. No NSR/PSD [R, absence].	$: 8-K 11/3/25; NVIDIA PR 5/26; FY26 results 8/27/26. MW: 10-K FY26; 8-K 8/13/26. Pwr/permit: IREN PR 7/24/24; TCEQ Title V list 10/8; Gov. Abbott 9/21.
Oracle (OCI) key site: Port Washington WI (Abilene counted under Crusoe)	OpenAI ~$300B/5y/4.5 GW = 13.3 stated / 16.0 IT read[3] [P]. Meta ~$20B, Tencent ~$7B/5y: MW n/d [P].	4.5 GW unlabeled; ~353 GPUs/MW implies gross → IT read = /1.2 [D].	Contracted: n/d as filed; '>10 GW secured' (call) [R]; OpenAI 4.5 GW [P]. Contracted: A201 >= 15.2 of 21.7, A102 9.5, A103 60 IT (~85) [R/D]; energized 0 at these three (A201 Q1'27, A102 Q1'27, A103 Q1'28) [R]. Company AI-cloud active MW n/d.	Energization targets only (A201 Q1'27; A103 Q1'28) [R]; utility / interconnection n/d; company 'secured 333.5 MW' [R].	n/d (Malaysian permits not in team files).	$: Bitdeer PRs 9/29/26, 8/31/26; A103 release 10/8 (TMCnet); market/contract_economics.xlsx MidTerm_20M_Search r24-25/33/36; Needham 10/2, 10/7 (secondary).
Nebius model v0.9e locks; key site: Vineland NJ	Microsoft: $14.49M per IT MW [E, house] (Contracts!E12)[10]. Meta $3B and $12B/5y: MW n/d [R]. KPI: Q2'26 deals **$20-25M** ACV/MW; mgmt comment on Q3-to-date short-term pricing **>$40M** (Q2 letter + call, 8/12/26)[7] [R]. LOCKED hurdles (v0.9e, per billed IT MW): non-MSFT **$27.63M**; clear-spot **$24.51M** base / **$22.68M** high; turn-positive $17.05M / $16.70M[8] [D]. Memo (blended, not a hurdle lock): **$23.13M** = Street FY27 ÷ our 531.8 billed MW, all customers [D].	Microsoft MW never stated by Nebius/Microsoft (300 MW = Vineland site scalability, 2024 20-F); house uses 240 IT MW est. [E]; Q2 KPI basis undefined; hurdles = billed IT MW.	Contracted > 3.5 GW (lower bound; 5 GW YE26 target) [R]; energized 181.5 → 193 (Mar → Jun-26) [E]; billed YE26 257.7 / 284.2, FY27 avg 531.84 / 659.16 [D]; connected guide YE26 800 MW-1 GW [R].	Vineland: 62 rented gensets (122.9 MW) + ~5 MW grid = ~107 MW IT ceiling; Bloom/LNG for the rest, no energization date [R/P/E].	Gensets unpermitted: NJDEP order 9/22, $1.07M penalty, 45-day permit deadline ~early/mid Nov [R]. City stop-work on Bloom/LNG (8/6, 8/10); amended site plan approved 8/17; Oct 14 Planning Board: no DataOne item [R].	$: 6-Ks 9/8/25, 11/12/25, 3/16/26; Q2'26 letter + call 8/12/26; model v0.9e Drivers!B6/B9, Debate_Grid!A10/A13/A18. MW: Capacity Quarterly MW M130/N130; Q1/Q2'26 letters. Pwr/permit: NJ Gov. 9/22; capacity/site_verification s.1.

[1] CoreWeave ~$40M/MW-yr (convert deck 9/17/26 sl.7): annualized revenue on 3-6-month contracts after a ~70% July SKU price rise. It is high because of the short term and GPU-inclusive spot pricing; marginal deals only (fleet $8.24M per avg active MW, Q2'26). MW basis unstated.

[2] IREN >$20M (recent 3-yr deals) / ~$25M (discussions, unsigned), per MW (IT): high because of the 3-yr tenor (vs the 5-yr Microsoft anchor at $9.7M) and GPU-inclusive cloud pricing (~2-yr payback). Portfolio KPI; no per-deal MW or counterparty.

[3] Oracle-OpenAI ~$300B / ~5 yrs / 4.5 GW is WSJ only (P); Oracle filings do not name it. IT read divides 4.5 GW by 1.2.

[4] Nscale: TCV and MW are from the S-1 (R), but the term years are press (Anthropic 6 yrs, Bloomberg/Reuters) or a 5-6-yr tranche midpoint (Microsoft 5.5), so both prints are tagged P.

[5] Lambda: $35B, ~350 MW (WSJ/Reuters/Bloomberg, Aug 31) and the 6-yr term (WSJ via TheEnergyMag) are press only and unconfirmed by Lambda or Anthropic; the $50B backlog is from an investor letter reported by WSJ (Oct 6). No S-1/DRS. Medium confidence.

[6] Crusoe ~$23.3M is whole-term TCV ($140B+) per GROSS contracted MW (6 GW+), not per year, and mixes facility leases, cloud and JV capacity. Not comparable to $/MW-yr (a 5-yr term would be ~$4.7M/MW-yr, illustrative).

[7] Nebius $20-25M (four Q2'26 deals) and >$40M: high because of 1-3-yr and up-to-6-month tenors vs 5-yr anchors and GPU-inclusive full-stack ACV; MW basis undefined. Q3 is NOT reported: '>$40M' is a mgmt comment on Q3-to-date short-term pricing - Q2'26 letter KPI chart (6-K Ex.99.2, 8/12/26, sec.gov/Archives/edgar/data/1513845/000110465926094568/tm2622968d1_ex99-2.htm) and CEO Volozh, Q2'26 call 8/12/26 ('negotiating ... $40-$50 million per megawatt ... one such deal has been signed'; stockanalysis.com/stocks/nbis/transcripts/655490-q2-2026/).

[8] Nebius hurdles = REQUIRED revenue per billed IT MW, not contract prints (GPU-inclusive full-stack revenue). Model v0.9e cells: non-MSFT 27.63 = Drivers!B9 = (12,300-2,643.8)/(531.84-182.33); clear-spot base 24.51 = Drivers!B6 (= Judge_Slide!B8, PT $237.15) / high 22.68 = Debate_Grid!A18; turn-positive base 17.05 = Debate_Grid!A13 / high 16.70 = Debate_Grid!A10. Separate memo line (not a hurdle): $23.13M = Street FY27 ÷ our 531.8 billed MW, all customers [D] = Drivers!B10 = $12,300M / 531.84 (= Judge_Slide!B16); includes the Microsoft anchor, unlike the ~$27.6M non-MSFT hurdle.

[9] Bitdeer A201 <= $22.4M: a CEILING because contracted MW is a floor (>70% of ~21.7 MW; 100% = 15.7); GPU-inclusive GB300 cloud (not a powered shell); 5-yr; customers unnamed; MW basis unstated in Bitdeer's releases ('critical IT' per secondary sources only, P). Source: GPU Market agent market/contract_economics.xlsx MidTerm_20M_Search (re-read Bitdeer PR 9/29/26).

HEADLINE: Only one contract with disclosed MW reaches $20M/MW: Bitdeer, ~15 MW, a <= $22.4M ceiling, basis from secondary sources. COMP BAND unchanged at $9.7-16.7M per MW-yr (low IREN-Microsoft 9.7, IT; top Lambda-Anthropic 16.7, P, Medium); Bitdeer's ceiling sits outside the band as a near-miss (model Drivers!B13).

[10] Nebius-Microsoft $14.49M per IT MW [E, house] = model Contracts!E12 = $17,392.9M / (5 x 240 IT MW est.); agrees with the Drivers 14.5 input (Inputs!F111). No MW stated by Nebius/Microsoft.

Tags: R = reported/primary (filing, company release, earnings call, regulator record); D = derived by us from R inputs; P = press-only, or derived with any press input; E = estimate (team model/alt-data); n/d = not disclosed. Red bold = print at or above $20M per MW. Active = in service as evidenced (site appendices: Denton, Childress, Abilene, Port Washington). Nebius Q3'26 results ~Nov 10 (est.). Full sources/URLs: peers/benchmark/peer_benchmark.xlsx (Sources tab).
