Peer KPI appendix: Nebius vs CoreWeave, IREN, Oracle (OCI), Nscale, Lambda and Crusoe

$ per MW-yr, contracted vs live MW, capex per MW. As of Fri Oct 9, 2026 (ET); frozen for Sun Oct 11 finals. Read from the locked team files (comparison.xlsx, peer_benchmark.xlsx, price_or_mw.xlsx, site appendices, model v0.9e); every value tagged [R reported | D derived | P press | E estimate | n/d]; superscripts = footnotes. Not a valuation; Nebius Q3'26 results ~Nov 10 (est.).

Company	Named-contract $M per MW-yr[1]	Company $/MW print ($M)[3]	Rev / active MW (K01)[4]	Fwd rev / billed MW[4]	Contracted MW[6]	Live MW[6]	Contracted / live	Capex / MW (K13)[9]	Net PP&E / MW (K14)[9]	MW notes (key site)
Nebius	14.49 Microsoft [E, house]; Meta n/d[2,11]	20–25 (Q2'26 deals); >40 mgmt comment; base ~12 [R]	11.92 [E] (Jun-26)	23.13 all customers [D]; ex-MSFT hurdle 27.63 [D][5]	>3,500 [R]	181.5→193 [E]; billed YE26 257.7/284.2, FY27 531.84/659.16 [D]	>18.1x [D]	77.9 [E]	67.6 [E]	IT/energized; contracted >3.5 GW is a lower bound (5 GW YE26 target) [R]
CoreWeave	n/d (no MW on any named deal)	~40 (3–6-mo deals) [R]	6.87 [D] (Jun-26)	11.29 [E] (Street FY27 / base avg MW 2,325)	3,700 [R]	1,500 [R]	2.5x [D]	20.0 [D]	31.2 [D]	IT-like active; ~4,200 contracted Aug-11 [R]; Denton ~260 IT live [D]
IREN	9.7–11.3 (Microsoft IT; NVIDIA stated) [D]	>20 (3-yr); ~25 unsigned [R]	7.05 [D] (Jun-26)	13.33 [D (R/R)] (YE26 ARR $4B / 300 IT MW)	260 [D][8]	~40 [R]	6.5x [D][8]	n/d	n/d	IT (AI); Childress ~75 IT active Oct [D, site]

NEBIUS LOCKS (model v0.9e, asserted by the build): Microsoft $14.49M per IT MW [E, house] (Contracts!E12) only · ex-MSFT hurdle $27.63M [D] · $23.13M = Street FY27 ÷ our 531.8 billed MW, all customers [D] · clear-spot $24.51M / $22.68M · turn-positive $17.05M / $16.70M · energized 181.5→193 MW [E] · billed YE26 257.7/284.2, FY27 531.84/659.16 [D] · K13 capex/MW 77.9 vs peer median 33.18 · comp band $9.7–16.7M · Bitdeer ≤$22.4M is the only disclosed-MW print ≥ $20M.

HEADLINES: Nebius: ex-MSFT hurdle $27.63M is ~1.7x the band top; live 193 MW vs >3.5 GW contracted (18.1x); capex/MW 77.9 vs median 33.2. | CoreWeave: no MW on named deals; ~$40M print is 3–6-mo pricing; 2.5x contracted/live; lowest capex/MW (20.0). | IREN: named 9.7–11.3 (band floor); >$20M only on 3-yr deals; 260 vs ~40 MW. | Oracle: OpenAI 13.3–16.0 [P]; >10 GW secured vs ~2,050 delivered; capex/MW 46.4. | Nscale: 11.7–16.2; ~17x contracted/live (≤81 live). | Lambda: Anthropic 16.7 sets the band top [P]; company MW n/d. | Crusoe: no per-deal $/MW; ~$23.3M is whole-term per gross MW; 6x.

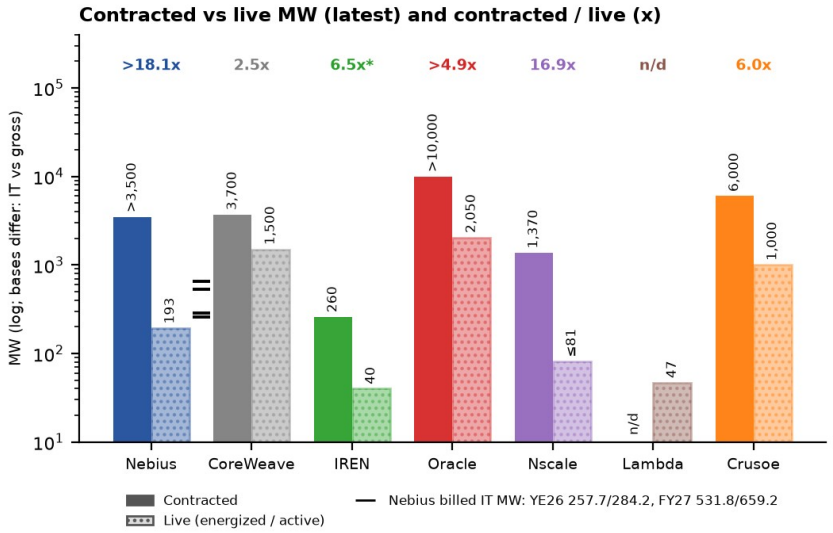

1 Named contracts = TCV ÷ term ÷ MW, IT MW where disclosed, else stated MW (comparison.xlsx Contracts_$MWyr cols V/W = peer_benchmark.xlsx Contracts col K, asserted equal). Comp band $9.7–16.7M = IREN-Microsoft 9.7 to Lambda-Anthropic 16.7 (P, Medium; memo set P1/NEW1/P2/O1/NEW2/O2); Nebius rows excluded.
2 Nebius-Microsoft $14.49M per IT MW [E, house] = model Contracts!E12 = 17,392.9 / (5 x 240 IT MW est.); neither company states the contract MW (300 MW = Vineland site size). Agrees with the Drivers 14.5 input.
3 Company prints are not single contracts; MW basis undefined; short tenors and GPU-inclusive pricing. Nebius >$40M = management comment on Q3-to-date short-term pricing (Q2'26 letter KPI chart; CEO on the Aug 12 2026 call), not reported Q3. Crusoe ~$23.3M is whole-term TCV per GROSS MW, not per year.
4 K01 = latest-quarter segment revenue x4 ÷ period-end active MW (comparison.xlsx; bases differ: Crusoe FY26E revenue / ~1 GW gross; Lambda Q2'25 press). Fwd = price_or_mw.xlsx Implied_Price (FY27 or run-rate ÷ avg billed MW).
5 Nebius hurdles (model v0.9e) are REQUIRED revenue per billed IT MW: ex-MSFT $27.63M (Drivers!B9, peer comparator); $23.13M = Street FY27 ÷ our 531.8 billed MW, all customers [D] (Drivers!B10, memo); clear-spot $24.51M / $22.68M (Drivers!B6 / Debate_Grid!A18); turn-positive $17.05M / $16.70M (Debate_Grid!A13 / A10).
6 MW bases are mixed (IT vs gross). Nebius live = energized 181.5 -> 193 MW (Q1 -> Q2'26, Capacity base case, E); contracted >3.5 GW is a lower bound (R). Billed IT MW (model v0.9e): YE26 257.7 / 284.2; FY27 avg 531.84 / 659.16.
7 Oracle live ~2,050 = cumulative AI MW delivered since Jun-25 at Aug-26 (E; peers/oracle M07; price_or_mw Implied_Price r16; peer_benchmark). comparison.xlsx Chart_Data shows 1,200 = May-26 vintage of the same series (its K13 period). Contracted '>10 GW secured' (FQ1 FY27 call) is a lower bound -> ratio shown as a lower bound.
8 IREN contracted ~260 IT (Microsoft 200 + NVIDIA ~60, D) vs ~40 MW AI operating at Jun-30 (R); ratio computed in this pack (comparison K04 has IREN n/d) and kept out of the median. Childress site ~75 IT active in Oct (sites appendix, D).
9 K13 = trailing-4Q cash capex ÷ trailing-4Q new active MW; K14 = net PP&E ÷ active MW (comparison.xlsx). Nebius capex funds not-yet-live MW (Worse vs median). Crusoe K14 = Abilene JV shell+power only, excluded from the median.
10 Bitdeer A201 <= $22.4M is a CEILING (contracted MW is a floor: >70% of ~21.7 MW; 15.7 if 100%); MW basis P. It is the only contract with disclosed MW at >= $20M/MW (peer_benchmark Contracts; comparison has none).
11 Nebius-Meta #1 shown n/d: filings state no MW. comparison.xlsx Contracts_$MWyr N2 carries 11.52 on an unsourced ~50 MW (E, low confidence); peer_benchmark shows n/d. Not used.
